PROFESSIONAL SUMMARY

Software engineer with over a year of experience building end-to-end B2B SaaS web applications. Specialized in frontend development with React, Next.js and the Redux ecosystem, with a solid backend foundation in Node.js/Express and Go (Golang), and experience in products held to security standards such as SOC 2 Type II. Lead frontend engineer of Teramot's 2.0 platform, one of the six startups selected for Endeavor's Scale Up program.

PROJECTS

GITHUB: https://github.com/nicolasandradedesarrollosit
LINKEDIN: https://www.linkedin.com/in/nicolás-andrade

SKILLS USED IN PROJECTS

BACK	FRONT	TOOLS
NODE JS/EXPRESS	REACT 19	GIT
GO (GOLANG) / CHI	TYPESCRIPT/JAVASCRIPT	DOCKER
PYTHON/FASTAPI	NEXT.JS	AWS
POSTGRESQL	REDUX TOOLKIT / RTK QUERY	GITHUB ACTIONS
MONGODB	HERO UI	JEST / VITEST
SWAGGER	AG GRID	PLAYWRIGHT
	STORYBOOK	STRIPE / MERCADO PAGO
	VITE	LOGTO (MFA)

EDUCATION

SYSTEMS ENGINEERING DEGREE — **MAR 2025 - DEC 2027 (EXPECTED)**
UNIVERSIDAD ABIERTA INTERAMERICANA (UAI)
Status: in progress

HIGHER TECHNICAL DEGREE IN SOFTWARE DEVELOPMENT — **MAR 2022 - DEC 2024**
INSTITUTO BELGRANO
Status: completed

ENGLISH - B2 (UPPER-INTERMEDIATE) — **PRESENT**
PREPARING FOR THE FIRST CERTIFICATE (FCE)

WORK EXPERIENCE

SOFTWARE ENGINEER - TERAMOT

DEC 2025 - PRESENT

- Led frontend development of the 2.0 web application with full product ownership: a React 19 and Vite SPA optimized for heavy usage, with state managed through Redux Toolkit and RTK Query.
- Built a data visualization module with AG Grid, connected directly to AWS Athena.
- Built a dashboard visualization tool through MCP (Model Context Protocol), creating the tools and driving the end-to-end iteration.
- Migrated authentication to the external provider LogTo, enabling company-segmented MFA and contributing to the SOC 2 Type II certification.
- Implemented Content Security Policy (CSP) and defined frontend security policies, strengthening the application's protection.
- Implemented the payment gateway end to end: Stripe for international payments and Mercado Pago for local payments.
- Contributed to the backend by building Go APIs with Chi, Swagger documentation and Gorm on PostgreSQL, and by defining new abstractions in the domain diagram.
- Optimized performance with lazy loading and modern React 19 practices (use, Suspense).
- Documented the component system with Storybook, using Hero UI as the base library.
- Reached close to 80% frontend unit test coverage.
- Introduced AI-agent-assisted programming, increasing both my own and the team's productivity.

PERSONAL & FREELANCE PROJECTS - SOFTWARE ENGINEER

JAN 2025 - PRESENT

- Built an order-management ERP for a local business (full stack, TypeScript).
- Built an e-commerce site with React and Node.
- Integrated Anthropic language models through a REST API built with FastAPI (Python), applying prompt engineering to optimize model responses.
- Implemented automations and web scraping with Playwright and Instagrapi.
- Set up CI/CD pipelines in GitHub Actions, branch protection rules and merge guards, standardizing the team's collaborative workflows.
